Reasons for Allowance

The instant invention is deemed to be directed to an unobvious improvement over the U.S. Patent 4,553,901 to Laurello. The vane (82) in the turbine of Laurello is similar to the invention disclosed by the applicant, but lacks the element of an inner platform having a flange portion protruding inward at a back end thereof. This key feature relates to how the vane is assembled in the turbine.

Prior Art

The patent to Przytulski (U.S. Patent 5,131,814) was cited for the teaching of a many of the elements, but lacks the inner leg having the arc like seal. It is unobvious to combine this reference with the Laurello reference because Przytulski contacts the inner platform differently (a direct connection to the inner casing used with a blade as opposed to the aforementioned seal with the inner casing as used with a vane) and there is no motivation to add the inner flange of Przytulski to the inner platform of Laurello

The patent to Przytulski (U.S. Patent 5,131,813) was cited for similar teaching of a many of the elements, but still needs to combine elements from the vane and the blade using forbidden hindsight.

Art Unit: 3745

The patent to Jacobs et al. (U.S. Patent 5,333,995) was cited for its teaching of using a hook member for assembly (col. 3 lines 16-24), but does not disclose using the flange which is located on the platform for assembly.

The patent to Speak (U.S. Patent 4,391,565) was cited for its teaching of an aft outer leg to increase backward gradually in a radius of its arc.

Conclusion

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
